

ALIP- Telecare Network NEWSLETTER November 2011

Editor's Comment:

Welcome to the November 2011 ALIP newsletter. Firstly a big **thank you** to all of you who completed our survey recently. The results have been analysed and the changes will start to be introduced from next month (December) however we can now confirm that the newsletter will remain a monthly publication in future.

The [DALLAS \(Delivery of Assisted Living Lifestyles and Scale\)](#) open innovation process continues to be a focus for the [Assisted Living Innovation Platform \(ALIP\)](#) and the Technology Strategy Board team is hard at work ensuring that the communities which will be funded under this programme will be up and running next summer. We will keep readers updated on the progress of this programme.

David Calder, KT4I project Manger

STOP PRESS

The NHS has published the Operating Framework for 2012/13 which has a number of telecare and telehealth references. No particular funding is identified.

The Operating Framework sets the priorities for the NHS for the next financial year. This is a period of rapid change with the setting up of the NHS Commissioning Board and Clinical Commissioning Groups. Some NHS funding is available to local social care authorities.

The references to telecare and telehealth link to the management of long term conditions (which uses up to 70% of NHS services) and QIPP (Quality, Innovation, Productivity and Prevention) – the challenge to find £20bn of efficiency savings by 2014/15.

In a speech today (24 November 2011), NHS Chief Executive identified 'Innovation' (the 'I' of QIPP) as one of four main themes for next year and a separate report is being prepared on this subject. He made references to telehealth and telemedicine as being examples of innovation.

Here are the specific excerpts from the published [framework](#).

Page 3

"...The role of innovation, too often the forgotten element of QIPP, will be critical. Rapidly spreading changes that improve quality and productivity to all parts of the NHS will be crucial: a clear example is the use of telehealth to improve services for patients with long term conditions. We must also

create the right conditions for rapid diffusion of good practice and the forthcoming Innovation Review will set out specific measures to achieve this”.

Page 16 Section Long Term Conditions (Section 2.22)

Telehealth and telecare offer opportunities for delivering care differently but also more efficiently. Use of both of these technologies in a transformed service can lead to significant reductions in hospital admissions and lead to better outcomes for patients. Using the emerging

evidence base from the Whole System Demonstrator programme, PCT clusters working with local authorities and the emerging CCGs should spread the benefits of innovations such as telehealth and telecare as part of their ongoing transformation of NHS services. They should also take full consideration of the use of telehealth and telecare as part of any local reconfiguration plans.

Page 23 QIPP

Risk stratification, care planning, patient involvement and supported self-care can transform the care of people with long term conditions and prevent the need for some reactive, expensive acute based care. This is particularly true where there is strong integration between the NHS and Social Care and existing resources, such as specialist community based nurses, are effectively used to meet the needs of patients with multiple long term conditions. Providing services supported by telehealth and telecare delivered at scale can maximise benefits for individual patients.

Page 41 Joint working with local authorities (Section 4.36)

4.36 PCT clusters will need to work together with local authorities to agree jointly on priorities, plans and outcomes for investment of the monies allocated for re-ablement in 2012/13. This could include: current services such as telecare, community directed prevention (including falls prevention), community equipment and adaptations, and crisis response services.

November Newsletter In-Brief:

This month the [HealthTech and Medicines Knowledge Transfer Network \(HTMKTN\)](#) were invited to update a European audience in Brussels about the unique knowledge transfer model operated in the UK at the European Innovation Partnership for Active and Healthy Ageing. One of the objectives for Knowledge Transfer for Implementation (KT4I), is to broaden our engagement with international markets in order to help UK expertise in telecare and telehealth and the associated services to find and develop new business opportunities. This pilot project is a new venture for the European Commission which to some extent replicates the UK model for ‘challenge led’ innovation. Success with this approach could shape the future funding landscape for collaborative R&D, and it’s really great to see the UK at the centre of this initiative.

Another successful Telecare Services Association (TSA) annual conference has come and gone but no sign of the Whole System Demonstrator (WSD) results – just a brief presentation from Professor Stanton Newman on reasons why people may not wish to use the technology based on analysis from the trial participants.

Detailed presentations were expected at [the eHealth and Telemed 2011](#) Conference ('Raising the standard – improving care, cutting costs') in London on 28-29 November 2011, but the WSD element of the programme has been replaced. Although the WSD results are still imminent, indications are that the Department of Health needs to complete some internal arrangements prior to publication.

If you missed the TSA Conference, there are some useful summaries at [Telecare Aware](#).

The [DALLAS](#) (Delivering Assisted Living Lifestyles at Scale) Programme has reached an important stage as 17 community seeds (from the 70 people selected) presented their outline proposals at a workshop in Manchester on 10 November 2011. There will be 3-5 DALLAS communities eventually covering up to 50,000 people running for three years from June 2012.

Presentations and videos from the Manchester workshops are now [available](#). In addition, a useful summary from the Birmingham DALLAS interoperability workshop is now also [available](#).

The deadline for community seed proposals was 23 November 2011 and invitations to the January 2012 workshop will be sent out on 16 December 2011.

Finally, until we have reviewed the recent survey responses fully, we are keeping this newsletter running on a monthly basis with weekly lists of interesting articles and links. Thank you to everyone who took the time out to respond in such detail. This is much appreciated.

DH: Long term health conditions 2011: research study

This report (just announced but linked to an April 2011 document) presents the results of the third and final wave of a three-wave tracking study commissioned by the Department of Health with Ipsos MORI. The aims of the research programme were to exploring attitudes towards 'self-care' and, more specifically:

- explore the general public's perceptions and behaviour with regard to both their own health and the NHS generally; and
- capture the attitudes and behaviour of those people with a long term health condition with regard to the self treatment of their condition and their use of healthcare services.

DH: Six out of ten people with dementia go undiagnosed – £2 million campaign launched to tackle dementia (UK)

Six out of ten people with dementia in England go undiagnosed. This means almost 400,000 people could be going without the vital support the NHS and social care services can offer. The National Audit Office estimates that, nationally, dementia costs health and social care services £8.2 billion per

year. Alzheimer's Research UK has estimated that the overall cost of dementia to society as a whole is £23 billion per annum. It is estimated that savings of £80 million could be made every year by improving hospital care for people with dementia.

Telehealth reference in Parliament - Citation: HL Deb, 16 November 2011, c704

Baroness Masham of Ilton (Crossbench)

My Lords, this group of important amendments illustrates that good care for all is what is needed. I shall say a few words on Amendment 79 on long-term conditions. As has been said, there are many long-term conditions, and there is great anxiety all over the country because of the change. What

the Minister says today will be very important and may allay some of the distress. There is a shortage of district nurses, which is an important issue for people who need dressings for leg ulcers, for example, which can last for a long time.

On a positive note, there is telecare and telehealth and other new technology for monitoring. People can be monitored in their own homes. If something goes wrong, people can call emergency services. Scotland is doing much better than England, and other countries in Europe, such as Poland and Holland, are using the system a lot. England could do a lot better for people with long-term conditions.

<http://www.theyworkforyou.com/lords/?id=2011-11-16a.690.8&s=telehealth#g704.0>
